

## Georgyanna Ink

1. Make sure your nails are dry and free of oils or creams.
  2. Swipe brush across ink.
  3. Pull skin away from nail.
  4. Apply ink sparingly in a scrubbing motion under free edge of nail.
  5. Wipe Excess from fingers and top of nail with dry paper or regular towel.
  6. Clean brush gently rubbing on paper towel.
- \*Do not submerge brush in water or cleaners.

Note: Nail ink's primary ingredient is zinc oxide which actually bleaches the free edge of your nail. Nail ink will not bleach fabrics and is not toxic.

P.S. Don't forget, ink works great on toes too!!
